JENGKA

FRIM RESEARCH STATION
Natural Forest Programme

INTRODUCTION

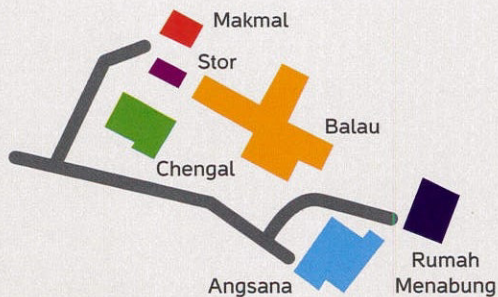

Jengka FRIM Research Station (SPF Jengka), was established in 1982, in a dipterocarp forest. This forest is a permanent forest area for timber harvesting. Its establishment is the result of a collaboration effort among the Forestry Department Peninsular Malaysia, the Pahang Forestry Department and Syarikat Jengka Sdn. Bhd.

The station is located approximately 250 km north-east of Kuala Lumpur. The station is strategically located close to Tekam Forest Reserve and Berkelah Forest Reserve., thus enable research on sustainable forest management to be conducted conveniently. As part of the forest area is still unlogged, the station provides an excellent opportunity to carry out research on virgin, as well as second rotation forests.

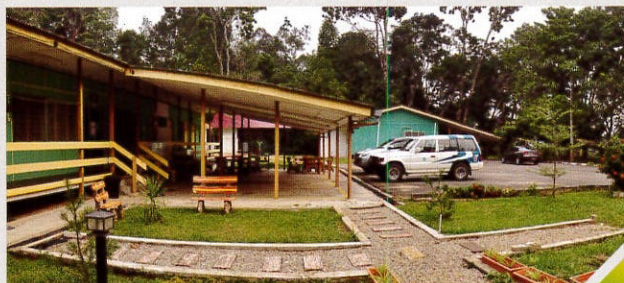

OBJECTIVES

- To be a reference centre for research and destination for eco-forestry education activities especially in the field of forest management
- To be a demonstration plot for forest management practice
- To highlight and disseminate information on forest management practice
- To optimise the use of the forest for long-term studies
- To create a platform for FRIM to establish collaboration with Forestry Department on research efforts, development and forest management.

FACILITIES

Accommodation	Balau - 5 rooms (3 persons/room) Angsana - 4 rooms (2 persons/room) 2 rooms (3 persons/room) Cengal - 3 rooms, (3 persons/room) Each room is equipped with a bathroom and a fan Total rooms = 12 (34 persons) Note: Additional mattresses available upon request.
